

DIT Installation Series Preparation Routine

This document provides guidance to the District Coordinator in how to prepare to co-facilitate the District Implementation Team Installation Series with their assigned Implementation Specialist.

Preparation Routine

1. Coordinator will gather any documents or previous work that might overlap with what is being asked in the installation series module so the team can build upon work that aligns and has already been started
2. Implementation Specialist and Coordinator will review the Coordinator's individualized learning plan. Implementation Specialist will answer any immediate questions and connect new learning to the content covered in the installation series modules
3. Implementation Specialist will provide an overview of content covered in the installation series modules, pointing out alignment to DCA items, DIT Concepts, and components of the MTSS Practice Profile
4. Coordinator and Implementation Specialist will consider the team's background knowledge and readiness for the module content so additional rationales and readiness work can be supplemented during the installation module learning
5. Coordinator and Implementation Specialist will practice using the tools and resources referenced in the installation module to identify how best to contextualize the information for the team
6. Activities are assigned to the Coordinator and Implementation Specialist to prepare to facilitate the team through module activities when prompted to do so
7. After the first DIT Installation Series session, Coordinator will access MiMTSS Data System to update the DIT's progress on installation checklist items and note any barriers impeding the team's efforts. Plan to address any items at an upcoming training session or meeting.

Michigan's MTSS Technical Assistance Center is funded by the Michigan Department of Education and the U.S. Department of Education, Office of Special Education Programs.
