

## Examples of Measuring Implementation

Participants are provided with two examples of how implementation fidelity could be measured.

### Daily Implementation Checklist

Select intervention components that you would prioritize to monitor for daily implementation. Add these 3-4 intervention components to the Daily Implementation Checklist for the implementing staff to self-monitor. This information could be on the back side of the data collection sheet for monitoring student behavior.

#### Example

Daily Implementation Checklist

Implementing Staff: \_\_\_\_\_

Intervention Components Agreed to Implement	Rating		
Completed point card	2	1	0
Provided student with prompt/break	2	1	0
Provided appropriate praise to the student when alternate/desired behaviors were exhibited by student 4-point scale	2	1	0
Notes:	Total Points: ___/6		

2 = Great! Implemented accurately & on time

1 = Need Improvement

0 = Didn't Implement

Goal = 100% implementation (6/6 total points)

## Addition to Intervention Script

Once the steps of the intervention have been scripted out, a column is added to script to record Yes, No, or Not Applicable related to each step of the plan.

### Example

Intervention Steps	Implemented	
Divide writing task into 3 major sections (starter, details, conclusion)	Y	N N/A
Tell Mike that for each section completed, he earns a “dot” that he should place in the envelope hanging on the side of his desk	Y	N N/A
Inform Mike that he can use the dots later to get out of other work	Y	N N/A
Review his self-management checklist/dot total sheet with him	Y	N N/A
Review each section of writing assignment, his goal and academic engagement behavior	Y	N N/A
Every Monday morning, a weekly goal should be discussed and collectively developed with Mike.	Y	N N/A
